AWARDS AND HONORS	The Bernstein Prize, Amherst College Department of Economics for best thesis.	2024.05

The Grew Bancroft Foundation Scholarship

2019.10

for one student in Japan to attend any four-year college of choice in the United States.

WORKING
PAPERS

Fringes of the Migration Industry (Writing Sample)

(undergraduate thesis; revisions in progress with Caroline Theoharides)

ABSTRACT: I study the impacts of policies that seek to eliminate fringe firms, those with small market share, in the migrant recruitment industry. Fringe firms include both fraudulent and quality agencies, but regulators and migrants lack information to distinguish them. Market regulation can thus lead to better protection of migrant workers at the expense of a decrease in migration. Using administrative data from the Philippines, I show that an exogenous increase in migrant wages drives fringe agencies to exit the market through decreases in employer demand. This increases the share of quality agencies in the market but decreases migration opportunities substantially. I then build a structural model of employer demand to establish the counterfactual where license requirements are more strictly implemented. My results suggest that this may decrease the proportion of migrants deployed through fraudulent agencies.

Breadth vs. Depth: A Text-Based Approach to Curriculum Design

(with Sebastien Brown, Erxi Lu, Ariana Ravitch, Tina Zhang, and Phillip Zhou)

Interactive web app submitted to the International Society of the Learning Sciences

ABSTRACT: Studies of education often rely on coarse disciplinary classifications or the number of majors, but effective curriculum design requires understanding student's course selection and its effects on post-graduate outcomes. We develop a method to quantify curricular breadth by applying deep learning and graph theory to text data found in course catalogs. Using 17 years of data from a liberal arts college, we show that mapping the curriculum as a high-dimensional network based on semantic similarity recovers intuitive relationships between courses cutting across disciplinary boundaries. We apply Weitzman (1992)'s diversity index to measure educational breadth in a fully distance-based and discipline-agnostic way, and show three facts about the college's curriculum: i) differences in content within disciplines and similarities across disciplines are substantial, ii) our breadth metric has good theoretical properties and can be interpreted as a combination of more "primitive" measures, and iii) our breadth metric predicts student enrollment even conditional on the number of courses offered.

WORK IN
PROGRESS

Migrants' Jobs

ABSTRACT: I collect daily observations from centralized postings of overseas jobs in six of the largest migrant-sending countries across greater Asia (India, Indonesia, Nepal, Pakistan, Philippines, Sri Lanka). The harmonized job-level dataset includes the names of the destination-country employer and origin-country intermediary, as well as the occupation, number of vacancies, offered wages, specific qualifications, and non-pecuniary amenities. The high-frequency data collection allows observation of both demand (job orders from the same set of destination countries to many origin countries) and equilibrium supply (sorting of similar workers to different destinations based on job characteristics), which I validate using aggregate-level administrative statistics. Using this data, I estimate the effect of a minimum wage increase for Filipino migrant domestic workers enacted in August 2025.

When ICE Comes to Town: Institutional Exposure and Political Attitudes Toward Immigration

(with Ariana Rodriguez Bruzon and Aryen Shrestha)

ABSTRACT: How do natives develop political attitudes about immigration, including in areas with few immigrants? We explore the political consequences of bringing localities in contact with federal immigration policies by exploiting openings of an especially salient institution: ICE detention centers. Using a matched event study design, we estimate the effect of detention centers on the prominence of immigration in local discourse, as measured from news coverage and speeches by local representatives, while also amplifying their political slant. We then test using individual-level surveys whether exposed community members develop sharper positions—both for and against—and place greater weight on immigration relative to other issues. Finally, we estimate effects on voter turnout and polarization in federal elections among affected counties. Findings shed light on how exposure to institutions can intensify local political engagement with immigration, amplifying existing partisan tendencies.

INVITED PRESENTATIONS	Amherst Data Science Initiative Amherst College, MA	2025.11
	Presented the project “Breadth vs. Depth: A Text-Based Approach to Curriculum Design” with coauthors under the title “Mapping the Liberal Arts: A Semantic Similarity Approach” and discussed implementation of our intervention with the college administration.	
	PIER Conference Williams College, MA	2024.04
	Presented my economics honors thesis, “Fringes of the Migration Industry” under the broader project name “Industrial Organization of the Migration Industry”.	
	Five College Anthropology Conference Amherst College, MA	2024.04
	Presented the qualitative work that underpins my thesis work.	
COMMUNITY SERVICE	MIT Economics Department, Predoc Event Planning Committee	2024-2026
	Amherst College, First-Year Residential Advisor	2021-2024
OTHER	Languages: English (fluent), Japanese (native), Mandarin (elementary). Programming: Python, Stata, R, ArcGIS (with arcpy), SLURM and bash, GitHub, L ^A T _E X. Citizenship: Japan.
